

HOME SCREEN >>

Select Language (Maybe this can use phone language or google translate? It will only need English, Spanish, and French for now if all are not available.

For all pages that have DAIL 911 button this will open a small window when clicked asking

"CONFIRM EMERGENCY CALL [] yes [] no" if Yes have phone call the number 911.

ABOUT US >>

Pull Data from this WordPress page so maybe when we update the page it will update app?

<http://www.doctorvisit247.com/why-us/>

PRACTITIONERS >>

Use the page from the website:

<http://www.doctorvisit247.com/physicians-app/>

We will need to be able to add, delete, and update these doctor profiles. Maybe we can also use direct from the WordPress site?

OUR SERVICES >>

Use the page from the website:

<http://www.doctorvisit247.com/services-app/>

Pull Data from this WordPress page so maybe when we update the page it will update app?

REQUEST A VISIT >>

STEP ONE: Will need this data to be sent to email address when first step is completed
(webmaster@doctorvisit247.com) They will then be required to also enter the [First Name, Last Name, Phone #, Reason For Visit, Current Location or Location of visit, Street, Suite/apt/unit, City, Zip Code, Special Instructions]

This will use the phones location GPS function to determine the address of the person to visit.

STEP TWO: Credit Card data entered will use Authorizenet.com for the processor. This must be secure. The WordPress website uses a plugin that we purchased which collects the card info and submits to authorizenet. Maybe you can use the plugin to work for this? I am including the plugin for your review.
